OCT 21 1999

21 MS. FOXWORTH: Hi. My name's Marilyn, and I
22 live in Atlanta, Georgia, and I'm a volunteer for
23 Earth Challenge.

24 I just wanted to relate an experience that I
25 had this summer. I spent some time at the

1

1 beginning of the nuclear cycle with the uranium
2 miners out west, and what I saw was their
3 environment devastated and their health
4 devastated. No statistic or money issue can
5 change what I saw out there, and every time I flip
6 on a light at my home that is something that I
7 think about.

8 Also, dealing with the end of the nuclear
9 1 cycle, [transporting this waste across the country
10 day in and day out past my door, past everyone's
11 door, is a real issue for me. I don't understand
12 everything about it, but I do understand that
13 2 there has to be a better solution than that.] To
14 me, my experiences with the beginning of the cycle
15 and the end of the cycle lead me to believe that
16 nuclear power is not environmentally safe and it
17 is not a clean alternative. So I hope that as
18 citizens of this country that we can work together
19 to come up with something else because I know that
20 innovations are out there.] We all have minds, and
21 there is a possibility. If we want another
22 possibility, we can find another possibility. And
23 that's all. Thank you.

24 MS. SWEENEY: Thank you.

25 MR. LAWSON: The next speaker is Leigh Lytle,
